

Packaging Project Engineer

360 Role in Sales, Service, Installation

My client is an independent, fast-growing packaging company. Their business is machinery sales, service & installation. The company has expanded its business throughout the UK and into Europe, thus requiring a Project Engineer.

As **Project Engineer**, you will need to be from an Engineering or Technical background. Your aim as Project Engineer, is to increase your client's productivity and efficiency. You will be expected to work closely with sales teams on site, designing and planning for production.

You will be expected to manage several projects at any given time. Being able to collaborate on factory layouts of all sizes, taking ownership ahead of installation, commissioning equipment.

My client is looking for an Engineer with three or more years' experience ideally. However, if you are an experienced engineer within the packaging sector with some project experience of less than three years with the drive and knowledge working within the food manufacturing sector or similar production working environment, you would also be considered.

Core Tasks

- Visiting clients – initial engineering clarification.
- Identify potential bottlenecks – to provide solutions.
- Hub – Be the link between machinery suppliers and clients.

What we see as important for you to have

- Engineering qualification
- Experience of three years of Project Management

Benefits

- Company vehicle.
- Financial bonus.
- 25 days holidays.
- Improvement initiatives – your voice and input are valued.
- Increased Pension (rise with service, medical insurance).
- As the company grows benefits will be reviewed.

Previous roles that make you relevant can **include the following**:

- Project Engineer, Packaging Machinery, Sales Engineer, Service Engineer, Servicing, Technical Support, Account Manager, M&E, Multi-Skilled Engineer

Further growth

- Multi-skilled Engineer position (s)
